Press Release

Intersection Control and Traffic Data Collection in San Pedro Sula, Honduras

Valencia, November 20th, 2017

Home to 1.5 million people and without a subway system or light rail network, traffic in San Pedro Sula is recognized as one of the main problems for its citizens.

Authorities are well aware of it, and not only want to help alleviate the commuting, but also intend to reduce the high carbon emissions causing the smog on the streets.

Citilog is proud to provide the Intersection Control and Traffic Data Collection solution that contributes to improve the urban transportation network of San Pedro Sula.

As of July 2017, the following solution has been provided:

- 110 XCam-p's: the non-intrusive field-deployable video sensor for presence and stop detection designed by Citilog for intersection control applications.
- 40 XCom's: the printed circuit board assembly (PCBA) embedding specific software designed by Citilog in order to interface up to 6 (six) XCam-p's with a traffic controller.
- 20 XCam-TD's: the non-intrusive field-deployable video sensor for traffic data collection (plus presence and stop detection)
- 30 SmartTraffic-TD+ deployed on Axis M1125-E.
- Interface with the Traffic controllers from SEMEX, Citilog's partner in South America for traffic management solutions.

About Citilog

Citilog is a member of the Axis group of company since 2016. Citilog is the leading provider of intelligent real time video analytic software for monitoring and surveillance solutions throughout the world. Citilog's suite of software-based products offers a variety of video analytics in the field of transportation such as Automatic Incident Detection, Traffic Data Collection and Intersection Control; as well as a Video Management System.

Citilog provides a full spectrum of solutions from software licenses to be installed in Axis' cameras or in locally-sourced hardware to turnkey solutions: video equipment, video analytics, enforcement, LPR, Video Management and more. The company's products enable immediate and efficient traffic, safety and/or security management of roadways, tunnels, bridges, intersections, as well as for facilities or transportation resources such as, airports, railways and sea ports where criminal or other security threats exist. Systems are deployed at some of the world's best known landmarks such as, the Lincoln and Holland Tunnels in New York; Lupu, NanPu and Yanpu bridges in Shanghai, China; M30 tunnels in Madrid, Spain; the Mont-Blanc tunnel spanning France and Italy and over 900 other locations.

Citilog is based in Paris, France with international offices in the USA, Hong Kong and Spain. More information is available at www.citilog.com.
