

A86, France

Cofiroute, the most prominent highway operator in France chose Citilog's solutions to provide safety and security for the largest tunnel infrastructure in the world.

At ten kilometers long, twenty to ninety meters deep, the tunnel incorporated has a pioneering, safety-enhancing design consisting of a double deck roadway carrying one-way traffic.

Citilog monitors 700 video inputs to alert traffic operators of any incident occurring in the tunnel.

In addition the junction between the A3 and A86 highways merges these two highways onto a viaduct. The road capacity of the viaduct was increased by turning the hard shoulders into traffic lanes.

In order to keep a high level of safety for road users on the section deprived of a hard shoulder, our Advanced Video Surveillance system was deployed to identify stopped vehicles.
