## Information note

### Availability of new AID solution (CT-IM 2021R1)

Bagneux, October 18, 2021

Dear Sir/Madam

We are pleased to inform you of the availability of a new software version of our AID (Automatic Incident Detection) system.

This new version CT-IM 2021R1 (composed of the server-based software V9.1R2E1.P1 and the edge-based application V2.2R2E1.P2) of our solution is available from October 18, 2021.

In addition to a number of patches and enhancements in this version, we have focused in particular on improving the cyber security of the AID system as a whole.

Earlier versions present two vulnerability risks that can vary depending on the overall environment in which the AID system is embedded:

<https://www.cve.org/CVERecord?id=CVE-2022-28860>

<https://www.cve.org/CVERecord?id=CVE-2022-28861>

If you are running a version released before October 2021, we suggest you get in touch with your usual Citilog project manager (or contact us via our support platform <https://citilogsupport.freshdesk.com> ) to arrange a meeting or video-conference to assess together the best way to secure your AID system.

Should you have any questions, please do not hesitate to contact us.

*Christophe Colombel, Product Manager, Citilog SAS*
